UMANIUS is the publication of Auren Foundation, which, as part of its founding mission, succinctly addresses topics related to corporate humanism. Its aim is to present, propose means of implementation, disseminate, and encourage the values advocated by civic humanism within private and public enterprises and organizations.

No 1 - CIVILIZATION AND HUMANISM

November 2025

The Royal Spanish Academy defines civilization as the body of customs, knowledge, and arts that characterize a human society, as well as the stage of material, social, cultural, and political advancement typical of more developed societies. Civilization is thus deeply intertwined with human society and the idea of progress.

Civilizations reflect the broadest cultural affiliation available to individuals, fostering a sense of cultural belonging and identity—even when those individuals may come from diverse cultural¹ backgrounds. Despite these differences, civilizations provide common elements that shape shared identities. In this way, civilizations are formed through the intersection of cultural sets, where the dominant traits usually stem from the best-organized cultures.²

Since the mid-20th century, the evolution of communication technologies, increased cultural exchange, and the global aspiration for material, social, and cultural progress have encouraged the vision of a universal civilization.³ This envisioned global civilization would emerge from the common elements of the world's diverse cultural systems—one built on a humanist foundation that values the beneficial contributions of each culture, while respecting their diversity. Such a vision fosters a global coexistence rooted in a humanistic understanding of society.

¹ Cultural sets encompass collective beliefs, ideologies, institutions, technologies, and even geographic and demographic elements. Cultures are more narrowly defined, focusing on a community's beliefs and ideologies but excluding technological and institutional aspects. See *Political Sociology* by M. Duverger, Ariel Publishing, 1976.

² A detailed analysis of the development and evolution of civilizations can be found in *Sapiens: A Brief History of Humankind* by Yuval Noah Harari, Debate Publishing, 2013.

³ See Samuel P. Huntington's *The Clash of Civilizations* (1993), published in *Foreign Affairs* (1996). He outlines nine major civilizations—Sub-Saharan, Latin American, Sinic, Hindu, Buddhist, Japanese, Western, Orthodox, and Islamic—each with distinct values and aspirations, inevitably prone to conflict.

The Vitruvian Man by Leonardo da Vinci symbolizes the connection between humanity and geometry, reflecting the role of proportion in both corporate practice and the advancement of civilization.

The Vitruvian Man by Leonardo da Vinci symbolizes the connection between humanity and geometry, reflecting the role of proportion in both corporate practice and the advancement of civilization.

No 1 - CIVILIZATION AND HUMANISM

November 2025

Within this inclusive framework—aligned with the core values of a universal civilization that upholds responsible progress—humanism emphasizes both the individual and collective worth of human beings. It favors critical thinking over the acceptance of dogma. Broadly speaking, humanism represents an attitude or behavior that elevates humanity through a commitment to freedom and responsible progress.⁴

Contemporary humanism focuses on a rational understanding of the world and is philosophically grounded in civic ethics, shaped by scientific and technological advances. This human-centered worldview is intertwined with the biosphere; it is driven by human well-being and ecological respect, highlighting human dignity, the pursuit of balanced development, and a commitment to fostering conditions that enable these aspirations.

While technological globalization is undeniable, humanistic civilization plays a crucial moderating role, generating essential equilibrium. It helps redefine humanity's relationship with the biosphere, ensuring that technology and human activity are deemed appropriate only if they contribute to societal well-being within ecological boundaries. This inclusive ethos applies to everyone—individuals and institutions alike—and nurtures a virtuous reciprocity shaped by a shared humanist vision. Thus, humanistic civilization, in its pursuit of the common good, supports the responsible sustainability of life on Earth.⁵

Universal human rights, as aspirational principles of humanity, are often enshrined in law and protected through treaties, customary international law, general legal principles, and other sources of international law.⁶ The global legal framework for human rights defines the obligations of governments to act or refrain from acting in ways that either promote or infringe upon the fundamental rights and freedoms of individuals or groups. Although human rights can serve as legal sources, only nations that have ratified the International Bill of Human Rights are legally bound to uphold them.

The European Union has a strong commitment to the promotion and protection of human rights, both within its borders and internationally. The Charter of Fundamental Rights of the European Union enshrines citizens' fundamental rights and is binding upon EU institutions, agencies, and national governments when applying European law.

⁴ The Amsterdam Declaration, unanimously adopted by the General Assembly of the International Humanist and Ethical Union (IHEU) at the 2002 World Humanist Congress, outlines the core principles of modern humanism: it is ethical and rational, supports democracy and human rights, links individual freedom with social responsibility, offers a response to dogmatic religions, values artistic creativity and imagination, and promotes transformative cultural expression. Humanism, as a life philosophy, seeks fulfillment through ethical and creative living. It explicitly rejects dogma and does not impose any creed.

⁵ See forecasts from the *Global Biodiversity Assessment Report*, 2019. Available at www.unesco.org.

⁶ The Charter of Fundamental Rights of the European Union consolidates rights previously scattered across various national laws and international treaties—from the Council of Europe, the United Nations, and the International Labour Organization. By making these rights more visible and accessible, the Charter contributes to the development of EU citizenship and the creation of an area of freedom, security, and justice.

Human Rights

The *Universal Declaration of Human Rights* is a landmark document adopted by the United Nations General Assembly on December 10, 1948, in Paris. It outlines, across 30 articles, the fundamental rights and freedoms to which all individuals are entitled. Three decades later, sufficient international consensus led to the establishment of binding obligations for signatory states through the entry into force of the International Human Rights Covenants. Alongside their optional protocols and the Declaration itself, these instruments constitute what is now known as the *International Bill of Human Rights*.⁷

Today, nine core international treaties form the foundation of the global human rights framework. These include instruments covering civil and political rights, economic and social rights, the fight against racism, the elimination of discrimination against women, the prevention of torture, the protection of children's rights, the rights of migrant workers, the prevention of enforced disappearances, and the rights of persons with disabilities.

Eleanor Roosevelt is widely recognized as the driving force behind the Universal Declaration of Human Rights.

⁷ The International Bill of Human Rights includes the Universal Declaration of Human Rights, the International Covenant on Economic, Social and Cultural Rights, the International Covenant on Civil and Political Rights, and its two optional protocols.

Conflicts, Crises, and Eroding Norms.

The past year was also marked by armed conflicts and humanitarian crises, exposing the fraying of international norms meant to protect civilians and the devastating human cost when they are flouted. These include horrific instances of international inaction and complicity in abuses that further human suffering, most notably in Gaza, Sudan, Ukraine, and Haiti.

Intentional homicides and deaths during conflicts There has been a global reduction in the rate of intentional homicide since the adoption of the 2030 Agenda in 2015. However, progress remains short of the target of significantly reducing all forms of violence and related death rates everywhere, interpreted as a 50 per cent reduction in the homicide rate by 2030. Almost 60 per cent of all women who were killed intentionally in 2023 were killed by their intimate partners or family members.

reduction in the homicide
rate by 2030

New evidence from 119 countries reveals groups most discriminated against and an upward trend in global experience of discrimination. On average, one in five individuals globally report having been discriminated against on at least one ground prohibited by international law in the past 12 months, with most countries reporting prevalence rates between 13 and 26 per cent. Persons in least developed countries report higher discrimination rates, on average (24.3 per cent), compared to other country groupings.

No 1 - CIVILIZATION
AND HUMANISM

November 2025

In the corridors of the Western multinational corporation World Global, voices intersect and blend. In the boardroom, executives gather to discuss the next major investment. Grey suits, silk ties. Laptops gleam like digital fireflies. But this is no ordinary investment. It represents a leap into an entirely different culture. A world map hangs on the wall, with pins marking the company's global locations. One pin stands out—marking a country rich in cultural heritage, with unique traditions, rules, and sensitivities. The economic and financial forecasts for the Expansion Plan are exceptionally promising. Substantial profits are anticipated.

The executives understand they must immerse themselves in the local culture—learning to bow in greeting, to drink hot tea during meetings, to respect sacred rituals. Still, clashes seem inevitable. Western values will collide with deeply rooted customs. Efficiency will confront social etiquette. Planned profitability will require a deep respect for indigenous values. Something beyond mere cultural awareness is needed.

During the meeting, the Vice President of Marketing raises a set of pressing concerns he's been reflecting on: what challenges truly lie ahead when investing in a culture so different from our own? The room falls silent. Among all the executives, he is the most internationally experienced, and so they listen closely as he elaborates:

– Will we truly understand the values of local managers and employees? How will we avoid misunderstandings? How do we build trust when even communication styles and rhythms differ? How do we ensure respect for such vastly different cultural paradigms?

His words stir unease. He has highlighted aspects of the investment that had not yet been fully explored or confronted. The

meeting ends without addressing the business plan that was supposed to be the day's main focus—a plan to which many resources have already been allocated.

A week later, the executives reconvene at the heart of World Global. They recognize they face a real dilemma. Expanding into a culturally distinct environment feels like stepping onto an invisible bridge. How do they cross without falling into the abyss? Amid the discussion, one executive brings up the Universal Declaration of Human Rights.

– Could this be our link? he asks. Could it serve as the bridge that connects our differences?

The Declaration emerges as a guiding light: a foundation of universal values adaptable to the cultural realities of their new venture. The executives examine it closely, drawing connections to the United Nations Global Compact, to which World Global is a

signatory. They conclude that if they continue aligning their policies with human rights principles—not just to integrate cultural values, but also to foster responsible progress in the communities they engage—there should be no insurmountable obstacles.

Their conclusion is clear: the new investment presents an opportunity to extend the company's humanist principles. This will not only facilitate integration and improve reputation but also enhance long-term profitability. The Expansion Plan must now incorporate concrete measures that highlight the company's core values—especially those relevant to the local context. Dignity, freedom of expression, equality, worker and supplier well-being,

responsible development, and environmental stewardship must remain central pillars of corporate action, even in these new markets. These policies are to be robust and enduring. A positive decision is reached.

Thus, World Global begins to build its Bridge of Rights in this distant corner of the world. Among the executives, there is a shared conviction: by embracing the challenge of cultural difference through corporate humanism, they may discover more than the success they had planned—they may uncover a path to mutual understanding and shared prosperity.
